SUMMARY

Software Engineer with 5+ years of experience designing, developing, enhancing, and supporting enterprise Java applications using Java 8/17, Spring Boot, Spring MVC, Hibernate, SQL Server, and Angular. Experienced in developing scalable backend services, RESTful APIs, and enterprise applications following object-oriented programming principles, layered architecture, SOLID principles, and design patterns. Strong expertise in Core Java, Collections, Multithreading, Java 8 Streams, Exception Handling, Transaction Management, and SQL query optimization. Hands-on experience with JUnit, Spring Security (JWT), SonarQube, Git, Maven, and Agile software development. Familiar with Microservices Architecture, OAuth2, OIDC, Docker, and Spring Cloud through self-driven projects. Experienced in using GitHub Copilot for code generation, refactoring, debugging, testing, and documentation.

TECHNICAL SKILLS

Programming Languages: Java 8, Java 17, SQL, JavaScript (ES6+), TypeScript

Core Java: Object-Oriented Programming (OOP), Collections Framework, Multithreading, Concurrency, Exception Handling, Java 8, Streams, Lambda Expressions, Functional Interfaces, Generics, Data Structures, Algorithms, File Handling

Backend Technologies: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, RESTful APIs, REST Web Services, Maven, JUnit 5, Mockito

Microservices: Spring Cloud, API Gateway, Eureka Server, Config Server, RabbitMQ, Kafka, Saga Pattern

Frontend: Angular, RxJS, Reactive Forms, Routing, HTML5, CSS3, Bootstrap, REST API Integration

Database: Microsoft SQL Server, SQL, Stored Procedures, Query Optimization, Database Design, Schema Design, Transactions, Indexing

Security: Spring Security (JWT), OAuth2 (Basic Understanding), OIDC (Basic Understanding), Secure REST API Development

Cloud & DevOps: Docker, Kubernetes, AWS Fundamentals

Code Quality & Testing: JUnit, SonarQube, Unit Testing, Code Reviews, Static Code Analysis, Debugging, Root Cause Analysis

AI-Assisted Development: GitHub Copilot, AI-assisted Code Generation, Code Refactoring, Debugging, Test Generation, Documentation

Tools: Git, GitHub, Maven, Postman, Swagger, SonarQube, IntelliJ IDEA, Eclipse, VS Code, ServiceNow, JIRA, Chrome Developer Tools

PROFESSIONAL EXPERIENCE

1. Tata Consultancy Services (APRIL 2023 – Present)

System Engineer

- Designed, developed, enhanced, and maintained enterprise-grade backend applications using Java 17, Spring Boot, Hibernate, Angular, and SQL Server supporting engineering and manufacturing workflows.
- Developed scalable RESTful APIs using Spring Boot, JSON, and layered architecture for seamless communication between frontend and backend systems.
- Implemented business-critical modules including Scope Changes, Audit Trail, Resource Planning, SSOW, Business Plan Approvers Configuration, Engineering Deliverables, and PM Update.
- Applied object-oriented programming concepts, SOLID principles, and design patterns to develop scalable, maintainable, and reusable software components.
- Optimized SQL Server queries, joins, stored procedures, and backend business logic to improve application performance and reduce response time.
- Resolved transaction management, data consistency, concurrency, and performance issues using Spring Transaction Management and Hibernate best practices.
- Developed reusable business services using Java Collections Framework, Streams API, Lambda Expressions, and Functional Interfaces.
- Built Angular components, services, routing modules, and reactive forms integrated with Spring Boot REST APIs.
- Performed unit testing, debugging, code reviews, and static code analysis using JUnit and SonarQube to ensure software quality.
- Collaborated with cross-functional Agile Scrum teams using Jira and Git throughout the software development lifecycle.
- Investigated production issues through root cause analysis and delivered permanent fixes to improve application stability and reliability.

2. Wipro (DEC 2020 – APR 2023)

Project Engineer

- Developed and enhanced enterprise Java applications using Core Java, Spring Boot, Hibernate, REST APIs, and SQL.
- Implemented new business features, change requests, and application enhancements based on functional requirements.
- Designed and modified RESTful web services using JSON for backend integration.
- Wrote SQL queries and performed database analysis to support application enhancements and issue resolution.
- Performed unit testing, debugging, defect fixing, and code reviews to ensure software quality.
- Investigated production issues through root cause analysis and implemented long-term solutions.
- Supported application deployments and production validation activities.
- Worked in Agile Scrum teams using Jira, Git, and ServiceNow following SDLC best practices.

CERTIFICATIONS

- Master Microservices with Spring Boot, Spring Cloud, Docker & Kubernetes
- Spring Framework Master Class
- Master Hibernate & JPA with Spring Boot

PROJECTS

Enterprise E-Commerce Microservices (Self-Driven Project)

Technologies: Java 17, Spring Boot, Spring Cloud, Hibernate, SQL Server, RabbitMQ, Docker, Spring Security (JWT), REST APIs

- Designed and developed a Microservices-based E-Commerce application using Spring Boot and Spring Cloud.
- Developed Product, Order, Inventory, Cart, Payment, and Shipping services following REST architecture.
- Implemented API Gateway, Eureka Server, and Config Server for service discovery and centralized configuration.
- Used RabbitMQ for asynchronous communication between microservices.
- Implemented Saga Pattern for distributed transaction management.
- Secured REST APIs using Spring Security and JWT authentication.
- Containerized microservices using Docker.

EDUCATION

Bachelor of Engineering in Computer Science

Truba Institute of Engineering & IT, Bhopal

2016 - 2020
